Experience

2024 - 2025

Nexon Logistics

Front-End Developer Intern

I worked at Nexon Logistics as a Front-End Developer Intern. My job was to help make web applications that work well on devices. I used web technologies to do this. I worked with designers and other developers to make sure the web applications were easy to use. We made features and improved the way people use the web applications.

I looked at peoples code and gave my feedback. I helped connect the web applications to systems using APIs. I made sure the web applications were quality and worked the way they were supposed to. I found bugs. Reported them. I checked to make sure the web applications did what they were supposed to do. Nexon Logistics Front-End Developer Intern job was a learning experience, for me.

2025 - 2026

Software Technology Parks of India (STPI), Gangtok

Foundation Course on IoMT & Wearables

Bachelor of Computer Applications graduate with a foundation in software development, web technologies and Internet of Things (IoT) projects. I completed a training in IoT and Wearables through Software Technology Parks of India (STPI) and successfully made an IoT-based ECG monitoring system using Arduino Nano 33 Board. I am skilled, in solving problems writing documents analyzing systems fixing bugs and developing projects. I have experience working with web technologies, databases and software development practices through academic and internship projects. I am eager to use my knowledge learn new technologies and contribute effectively in a professional environment and create high-quality software products.

Projects

Nexon Logistics Website

I worked on the Nexon Logistics website. I made sure the Nexon Logistics website looks good on all devices and loads quickly. The goal was to make the Nexon Logistics website easy to use for everyone.

Transformation Tech Fest Website

I worked on the Tech Fest website for Transformation. I made sure the website looks good on all devices by adding UI components. This helps to get people engaged with the Transformation website.

Personal Portfolio

I made a website that's just about me. This website has all my projects and the things I am good at. It also has all the certificates I got and the things I did well at work. My personal portfolio website is where I can show people what I can do and what I have done.
